## Project Design Phase-II Technology Stack (Architecture & Stack)

| Date          | 12-06-2025                                      |  |
|---------------|---|--|
| Team ID       | LTVIP2025TMID52018                              |  |
| Project Name  | Resolvenow: your platform for online complaints |  |
| Maximum Marks | 4 Marks   |  |

## **Technical Architecture:**

The Resolve Now platform is designed with a scalable 3-tier architecture that includes the presentation layer (frontend), business logic (backend), and data storage layer. The solution ensures performance, security, and ease of integration with third-party APIs (e.g., Stripe for payments).

**Table-1: Components & Technologies:** 

| S.No | Component           | Description                                     | Technology                            |
|------|---------------------|---|---------------------------------------|
| 1.   | User Interface      | Web-based interface for clients and freelancers | HTML, CSS, JavaScript / React Js etc. |
| 2.   | Application Logic-1 | Complaints posting                              | Node.js, Express.js                   |
| 3.   | Application Logic-2 | Admin panel                                     | React js, Node js                     |
| 4.   | Application Logic-3 | Complaint messaging system                      | Express.js, Mongoose                  |
| 5.   | Database            | Stores user data, jobs, applications, messages  | MongoDB                               |
| 6.   | Cloud Database      | Scalable DB (if deployed)                       | MongoDB Atlas (optional)              |
| 7.   | Infrastructure      | App runs on local development server            | Node.js server on localhost           |

**Table-2: Application Characteristics:** 

| S.No | Characteristics          | Description   | Technology                                    |
|------|--------------------------|---|---|
| 1.   | Open-Source Frameworks   | Frontend frameworks   | React.js, Node.js, BootStrap,<br>Tailwind CSS |
| 2.   | Scalable Architecture    | 3-tier architecture with RESTful APIs                                 | Microservices                                 |
| 3.   | Security Implementations | Password hashing, role-based access, CORS handling                    | bcryptjs, JWT (future),<br>CORS middleware    |
| 4.   | Availability             | Runs locally, can be deployed to cloud (e.g., Vercel + MongoDB Atlas) | Node server + cloud<br>deployment (optional)  |

| 5. | Performance | Lightweight frontend, efficient<br>REST APIs, can scale with load<br>balancer | React for UI, Express for fast APIs |
|----|-------------|---|-------------------------------------|
|----|-------------|---|-------------------------------------|
